To whom it may concern,

I wanted to express my interest in the career path as a Front End developer or Full Stack Developer. I have a long history and background in Information Sciences and Technology (IST) and problem-solving from my previous job experience.

I recently graduated from Penn State in August 2024 and will be relocating to Philadelphia, Pennsylvania. I am looking for opportunities that match my education and skills to begin my career path. I have proficiency in various programming languages including Java, JavaScript, and Python. AWS is also a platform I have used in the past and feel comfortable pursuing. My most recent project work experience was developing a functional app for Penn State Hershey Medical Center for patients with Congenital Heart Center using Firebase for the back-end and React Native for the front-end. This project is what kickstarted my love for front end programming and allowed me to begin seeking opportunities that would allow me to grow in this field. This internship allowed me the opportunity to work in a team setting to collaborate together to create a stakeholder approved product to deliver.

In addition, my previous job experience as a Guest Service Agent/Receptionist at both The Carnegie House Hotel and the Penn Stater Hotel & Conference Center has strengthened my social and problem-solving skills as well as my ability to provide exceptional customer service. I have years of experience with analyzing complex guest situations, identifying issues, and applying well thought out solutions. I would love to be able to translate these soft skills into my technical skills to contribute to a bigger picture.

I am excited to integrate my love for technology and problem-solving into real-world solutions. Thank you for considering my application. I'm very grateful for your time and attention.

Sincerely,

Bradie Fernandez
